PROFESSIONAL SUMMARY

Founder's-office operator and mechanical engineer with 1 year of full-time experience alongside multiple internships, spanning product sourcing, cost engineering, manufacturing, and go-to-market for a fast-scaling consumer-electronics brand. Own launch timelines end to end — sourcing, certification, design, packaging, and production — evaluate vendor quotes against a COGS-based margin model, vet and negotiate with China and India suppliers, and author the process documentation that standardizes how products get built and shipped. Backed by hands-on hardware experience (EV-kit design, Formula-Student manufacturing) and strong communication, stakeholder-management, and analysis skills.

EXPERIENCE

Founder's Office

Present

Armor — Consumer Electronics Brand

- Support founder-level operations across sourcing, product, go-to-market, and production for a fast-scaling brand launching power banks, TWS, adapters, cables, keyboards, mice, and controllers.
- Own and run the product launch tracking system, coordinating sourcing, BIS/WPC certification, design, packaging, and production timelines across the full portfolio to hold every product to its target launch month.
- Evaluate vendor quotes against a COGS-based sourcing model across 9+ product categories — flagging band/spec mismatches, protecting target margins, and setting the ceiling MRP and cost-cut levers before commitments; maintain a running ledger of every quote checked.
- Source, vet, and negotiate with domestic and overseas suppliers (China and India), running factory-video vetting to classify trader vs assembler vs manufacturer and reject traders before samples ship.
- Triage supplier catalogues of hundreds of models against price bands and must-have features to shortlist launch candidates (verified a 341-model supplier catalogue against target economics).
- Co-manage design sprints across product categories and research low-cost prototyping methods, including 3D-printed molds, from concept through iteration.
- Author the brand's launch and process documentation — factory-vetting guideline, power-bank testing sheets, battery-cell sourcing list, and multi-stage QC / inspection checklists — locked into a single standardized house format.
- Build GTM market analysis — price-band ladders across 17 categories and a demand × ease-of-entry ranking of 12 accessory lines — to prioritise which products and bands to enter.
- Run product testing (adapter/cable compatibility, power-bank subjective and objective checks) and create assembly SOPs to standardize production workflows.
- Support new-product development for Kickstarter launches, review manufacturing and supplier agreements, and manage sample and finished-goods inventory across the portfolio.

Founder's Office

Prior

26ideas — AI-first OS

- Coordinated the founder's daily agenda, 1:1 meetings, and operational execution across business and personal consulting verticals, prioritising high-impact tasks.
- Drafted and managed professional communications with clients and stakeholders, ensuring clarity and timely follow-ups.
- Supported preparation and delivery of sales proposals and client presentations tailored to specific business needs.
- Played a key role in fundraising — creating pitch decks, researching potential VCs, and drafting targeted outreach that contributed to investor engagement.
- Automated business workflows using n8n, GPT agents, and APIs, saving ~24 hours per week and improving operational efficiency.
- Managed multi-functional tasks across sales, technology, training, and content, and grew social-media engagement through a tighter content pipeline.

Mechanical Design Lead

E-Mobility

Dimension Six Technologies Pvt Ltd · hook.bike

- Designed the Hook EV conversion kit for bicycles — 30% performance boost and 30 km range — with a focus on cost-effective design and manufacturing.
- Led a small team of 3 engineers from CAD through working prototype, emphasising low-cost solutions.
- Planned the sales and launch strategy targeting 100 units in 3 months, defining customer segments and go-to-market approach.
- Earned positive feedback on the product's natural feel and usability during initial trials before launch.

Chief Manufacturing Officer

Formula Student

DJS Racing — Formula-Student Racing Team

- Managed end-to-end supply-chain operations, overseeing global procurement of materials and parts to quality and performance criteria.
- Implemented PERT/CPM techniques to plan the manufacturing timeline and ensure on-time delivery of the final vehicle.
- Directed the entire manufacturing process — integration and assembly of all vehicle components — and collaborated with sponsors for custom component manufacturing.

Business Plan Lead

Formula Bharat

DJS Racing — Formula-Student Racing Team

- Led a team of 16 in the Business Plan Static Event at Formula Bharat, a national motorsport competition.
- Built a business plan around the commercial potential of the team's electric-vehicle chassis, with financial projections and compliance strategy for year one.
- Integrated technical, financial, and market research across departments into a single business strategy.

EDUCATION

SVKM Dwarkadas J. Sanghvi College of Engineering — Mumbai

B.Tech in Mechanical Engineering

SKILLS

Sourcing & Cost Engineering: COGS-Based Sourcing Models · Vendor Quote Evaluation · Price-Band Analysis · Supplier Negotiation (China & India) · Factory Vetting · Catalogue Triage · BIS / WPC Certification Coordination

Product & Manufacturing: Design Sprints · 3D-Printed Molds & Prototyping · Assembly SOPs · Product & QC Testing · Launch Timeline Management · Supply Chain & Procurement · PERT / CPM Planning · SolidWorks CAD

Operations & Documentation: Founder's Office Operations · Cross-Functional Coordination · Process & Launch Documentation · Inventory & Sample Tracking · GTM / Market Analysis

Communication & Tools: Professional Communications · Stakeholder Management · Sales Proposals & Pitch Decks · Advanced MS Office (PowerPoint, Excel, Word) · Google Workspace · Automation Tools (n8n, APIs)
